task (15%)	The problem statement is not provided, or it is not in PDF format.	The provided statement does not reflect the company's needs, and/or it is not well-drafted.	The statement reflects the company's needs in an overly simplistic way.	The statement reflects the company's needs, but without going into detail.	The statement accurately reflects the company's needs and requires a complex, functional database.
E-R Diagram (UD2) (35%)	The E-R model has not been created, or there are more than 3 incorrect entities and/or relationships.	The entities and relationships are partially identified, but there are several errors in the diagram and/or in the identification of the primary keys.	The entities and relationships are identified, but there are 1 or 2 errors in the entities, relationships, or primary keys.	All entities and relationships are correctly identified, with some minor errors in the definition of attributes. The diagram is created digitally using appropriate software.	All entities and relationships correspond to the problem statement. The diagram has been created digitally using appropriate software.
Relational Model (UD3) (25%)	The relational model has not been created, or it has been created incorrectly.	The tables are only partially created, and there are several errors in the identification of tables, primary keys (PK), foreign keys (FK), or in the transformation of the relationships.	La identificación de las tablas del modelo relacional es correcta, pero existen errores en la transformación de las relaciones y/o en la identificación de las PK o FK.	-	The identification of the tables in the relational model is correct, but there are errors in the transformation of the relationships and/or in the identification of the PKs or FKs.
Normalization (UD 4) (%25)	3NF is not verified, or the tables have not been normalized.	An attempt has been made to normalize the tables, but the process up to 3NF has not been applied correctly.	The tables have been normalized to 3NF, but the process has not been followed correctly, or there is no justification for the process.	All tables are in 3NF, but the reason for this has not been explained in detail.	All tables are in 3NF, and the reason for this has been justified in detail.

*For the E-R model section, it will not be possible to obtain a higher score than the one achieved for the problem statement section.
